

Stop the Rate Hike!

Energy Survey

In the Idaho Power rate case, AARP is recommending that the PUC set up a discounted rate for the first 600 kwh you buy, with a higher rate for any electricity you use above that.

This is good if you use less than 600 kwh a month, but many low income people live in houses with electric heat and without insulation, so they have higher than average bills. This rate structure would hurt those families.

We need to know how ICAN families would be affected by this proposal. Please check your energy bills and let us know how many kwh you use each month.

AVISTA has now asked for a rate hike too!! This may impact Avista customers too!

Name _____

Utility Company _____

KWH _____

Month/year of bill _____

Yes No I would like to hear more about this issue!
